

Hot! Hot!

Powered by IDView

Your 960H DVR is **HOT** to the cloud out of the box. IDView has preconfigured your system to allow you to quickly view your camera system using your computer or Smartphone. Just go to xmeye.net and use the login user name/password provided on the left hand side of the unit to log in to the WWW.

Your 960H DVR is also **HOT** for traditional DDNS connectivity. While the cloud access does not require port forwarding of any sorts, the DDNS connectivity does provide a more fluid remote viewing experience through direct remote access to the DVR.

Whether with the cloud or via DDNS, **your IDView 960H DVR is hot** and ready to go!

Just a few clicks, you can be viewing your camera system from anywhere, anyhow, anytime.
