

USB UPGRADE (U-Boot)

1. You need an update file (update.img) corresponding to your device. Please make sure that you have the right file. If you are not sure, please contact us.
2. Create a txt file, name it "auconfig". Open it and Type in "update.img" (under English input method) and save.

2-1 the txt file

3. Put the update file and txt file into your USB device's root directory (it has to be the root directory).
4. Shut down your device, plug the USB in, then power up the device.
5. Wait for it to complete.

2-2 once powered up, there is nothing you need to do

6. The device will then restart, remember to remove the USB device, otherwise the process will repeat (twice at most).

NOTE: Any kind of USB off plug or power off during the blue screen is not allowed, when blue screen is gone, you need to remove the USB fast and then you can restart.
